## Risk and reward profile

The above indicator reflects the historical level of risk and reward of this share class over the last 5 years. As it is based on its historical behaviour, it does not necessarily reflect your future risk, nor reward. In particular, the financial instruments we use have specific characteristics that may not be adequately reflected in the indicator above.

This share class is classified as above, since it has experienced large movements in its price. This classification is solely valid as of the date of this document; it can change in the future.

If you invest in a fund in the category "1" above, you may sustain a loss. A fund in this category is not risk-free at all times.

This fund does not provide you with any guarantee on performance nor on the value of your investment in it. The latter may consequently go up, as well as down.

The indicator captures the impacts on the Fund of adverse movements in financial markets and currencies, under normal market conditions.

The following other risks can be significant to the Fund:

- The bonds and shares in which we invest can be easily sold under normal market conditions. Exceptional circumstances may lead to situations where these can only be sold at a loss for you.
- Investments may be particularly concentrated on few economic areas or economic sectors.
- Counterparties to non-exchange traded financial instruments may fail to meet their obligations. We mitigate this risk by a thorough analysis of the financial condition of the counterparties with which we enter into such arrangements.
